Spacer Kit for Gas Stove

This set of spacers are made from high-quality stainless steel making them extremely durable and dishwasher safe. The spacers are placed directly on top of the stove between the grates and the bottom of the Flat Top to create a larger air gap to allow for adequate air circulation to the gas burners. Care should be taken not to place the spacers directly above the flame from the burner. Distribute the spacers evenly across the surface of the grates to create a stable platform for the Flat Top. The flat side of the spacers should be placed on top of the grate with the bent sides pointing up.
