

## Revised Assembly Instructions - Warning!

Please scan the QR code for updated assembly instructions.

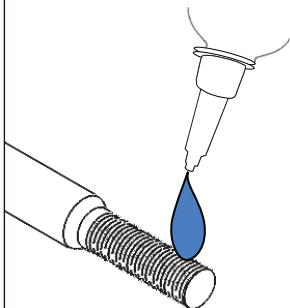

At Veloretti, we are constantly working to get our products better and safer. Based on feedback from our clients we update our manuals on a regular basis. With this QR code you will always have access to the most recent instructions.

In addition to the recommended, regular inspections including bolt tightness, the enclosed thread lock adhesive must be applied to the threads of the relevant bolts during the initial assembly to minimize the risk of loosening.

For any future disassembly or repair of the rear axle, it is important to reapply thread lock adhesive during reassembly. An additional unit has been included for your convenience should this be necessary.

If you require additional threadlock adhesive, please contact our Customer Care team.

Please also continue to ensure that regular bolt tightness checks are done and a visual check for any damage.
