Section 4. FIRST AID MEASURES

INHALATION: Remove person to fresh air.

EYES: In case of contact with eyes, rinse immediately with plenty of water for 15 minutes. Seek medical attention when eyes still feel uncomfortable.

SKIN: Remove all contaminated clothing. Immediately cleanse affected areas thoroughly by washing with mild soap and water. Get medical attention if there is skin allergy.

INGESTION: If victim is drowsy or unconscious, place on left side with head down.

Do not give anything by mouth.

If victim is conscious, vomiting should be induced by gently placing 2

Fingers on the back of the throat. Get immediate medical attention.

Section 5. FIRE FIGHTING MEASURES

Extinguishing media: Dry chemical, CO₂. Universal type foam.

High temperatures and fire conditions may cause rapid and uncontrolled polymerization which can result in explosions and the violent rupture of storage vessels or containers. Avoid the use of a stream of water to control fires since frothing can occur.

Harmful products of combustion: Oxides of carbon, sulfur, nitrogen, and phosphorus. Other irritating organic gas.

Section 6. ACCIDENTAL RELEASE (SPILL MEASURES)

Spontaneous polymerization can occur. Eliminate ignition sources. Use eye and skin protection. Place leaking containers in a well-ventilated area. Dike and recover large spills. Soak up small spills with inert solids (such as vermiculite, clay) and sweep/shovel into disposal container. Wash spill area with strong detergent and water solution; rinse with water, but minimize water use during clean-up. Do not flush to sewer! US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll-free number for the US Coast Guard National Response Center is (800) 428802. EU Regulations require the consultation of Directive 98/24/EC. Dispose and report per regulatory requirements if necessary. Please prevent washing from entering waterways.

Section 7. HANDLING AND STORAGE

Handling: Most acrylic monomers have low viscosities, thus only needing room temperature conditions to facilitate proper pouring techniques. However, viscous type gels such as these may require heating to facilitate proper pouring techniques. To ensure that this happens, product may be heated to 60°C/140°F for not more than 24 hours. Do NOT use localized heat sources such as band heaters to heat/melt product. Do NOT use steam. Hot boxes and ventilated rooms are recommended for heating/melting material. The hot box and/or room should only be set to a maximum temperature of 60°C/140°F. Do not overheat, as this may compromise product effectiveness and should be avoided. Refrain from multiple reheating of product, as this will also diminish the quality of the product. Product is extremely light sensitive. If exposed to natural light or UV light, material will cure very quickly, so avoid whenever possible. Prevent direct contact with skin and clothing.

Storage: Keep containers tightly closed. Store in a cool, dry place, away from heat and all types of light. Store at temperatures below 100°F/38°C but above the product's freezing point. If no freezing point is given, keep above 32°F/0°C at all times. Avoid exposure to light. Do not dispense the poured-out gel back into the original container.

Quality guarantee period: 12 months

Section 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

General: To identify additional Personal Protective Equipment (PPE) requirements, it is recommended that a hazard assessment in accordance with the OSHA PPE Standard (26CFR1910.132), or European Standard EN166 be conducted before using this product. Provide eye-wash stations and safety showers. Wear impervious clothing to prevent ANY contact with this product, such as gloves, apron, boots, or whole-body suit. Nitrile rubber is better than PVC.

Accidental Ingestion Protection: Post mark like “Industrial Materials”, “Fasting”, or other labeling on visible area of the package.

Eye/Face Protection: Wear chemical splash goggles.

Skin Protection: Wear impervious gloves.

Section 10. STABILITY AND REACTIVITY

Stability: Normally Stable; May affect the stability in environment exposed to light and/or high temperature.

Hazardous Decomposition Products: Fumes produced when heated to decomposition may include oxides of carbon, sulfur, nitrogen, phosphorous, and other organic gas.

Incompatibility (Materials to Avoid): Polymerization initiators including peroxides, strong oxidizing agents, copper, copper alloys, carbon steel, iron, rust and strong acids & bases.

Conditions to Avoid: Storage >100/38°C, exposure to light, loss of dissolved air, loss of polymerization inhibitor, contamination with incompatible materials.

Section 11. TOXICOLOGICAL INFORMATION

This product is a free solvent, carcinogenic material. The general damage is contact stimulation. Excessive or repeated contact may stimulate skin. Long-duration and short distance contact may stimulate eyes. The main irritant is acrylic esters.

This product is low toxicity: LD50 > 3000mg/kg

Section 12. ECOLOGICAL INFORMATION

To the best of our knowledge, the ecotoxicological and chemical fate properties have not been thoroughly investigated. Do not allow uncured gel to enter drinking water suppliers, wastewater, or soil. It becomes a typical polymer after curing, which has no direct damage to the environment.

Section 13. DISPOSAL CONSIDERATIONS

Non-contaminated, properly inhibited product is not a RCRA hazardous waste. It is the generators responsibility to determine what is classified as a hazardous waste. Comply with all federal, state, and local regulations. Dispose of diking material and absorbent in compliance with State, Local, and Federal regulations. Residual vapors may explode on ignition; do not cut, drill, or weld on or near the container. Mix with compatible chemical which is less flammable and incinerate.
