

Constructing the Stand

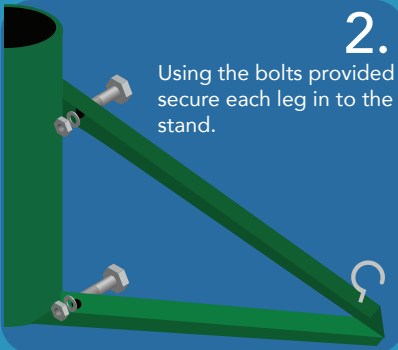

1.

Pull open all four legs and adjust them to the correct angle so they fit into the stand.

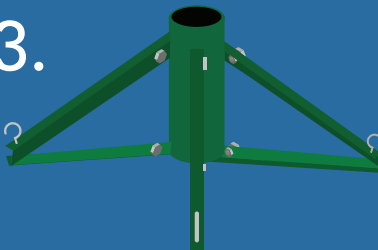

2.

Using the bolts provided secure each leg in to the stand.

3.

Continue for all four legs, ensuring all nuts and bolts are secure.

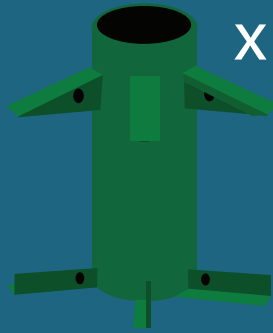

6.

Rotate the tensioner until the cable is tight. This will provide added structural integrity to the tree.

Securing the Tree

4. Locate the pre-attached cables, just underneath the top section.

5.

Feed the cables between the branches, ensuring they do not pull, snag or wrap around any branches or support cables. Attach each cable to the relevant mount on the stand using the tensioner hook. Loosen the tensioner to fit the hook if necessary.
