

WETSUIT CARE

O'NEILL INSTRUCTION GUIDE

01 TAKING OFF

Avoid taking off your wetsuit while standing on gravel, grass or other rough surfaces. Instead, use the O'Neill Wetsuit Change Mat or lay down a towel to stand on.

02 CLEANING

Rinse your wetsuit in fresh, cold water and turn inside-out to dry in the shade lying flat. It is critical NOT to wash your wetsuit with hot water, dry it in the sunlight, or leave it in the boot of your car for long periods of time. Heat contact with neoprene affects the fabric's flexibility and durability.

03 DRYING

At home, hang your wetsuit on a wide plastic hanger (not wire) in a well-ventilated area; this will prevent deterioration and creases, do not fold.

CARE NOTES

Wetsuits are designed to be worn in the salt water only and not in chlorinated water. Never use a washing machine, dryer, iron, bleach or professional dry cleaner.

To reduce the smell of your wetsuit, fill up the O'Neill Change Mat or bucket with cold water and soak your wetsuit inside out with specialty wetsuit cleaner.

If you have trouble getting your foot in the wetsuit, try putting a plastic bag or sock over your foot to help slide your foot into the leg hole.

Do not wash your wetsuit with hot water, dry in the sunlight, or leave it in the boot of your car for long periods of time.
