

How-to guide

espressoCreator
espressoProtector

Step one

Grab a Plastic Card (like a credit card) as you'll need this later for removing bubbles.

Make sure you're applying your screen protector on a clean table in a dust-free environment.

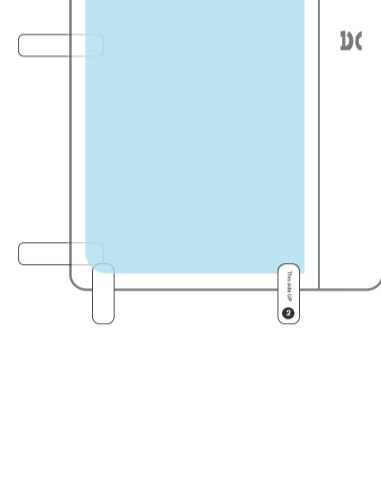

Step two

Flip your Display over so that the back of it is facing up from the table. Grab the **Guide Stickers** from your sticker pack and half-stick them along the TOP long edge of the Display, as pictured.

Step three

Flip the display back over and gently align the screen protector over your Display, make sure the espresso logo is on your RIGHT and the number 2 Sticker is facing up like in the picture.

Step four

IMPORTANT: Match the round corners from your screen protector to the round corners of your Display.

Step five

Fold the 3 **Guide Stickers** over so that they secure the screen protector to the Display.

Step six

Grab the **Lift Sticker** from your sticker pack and half-stick it to the right hand side of the screen protector. Now you can lift the screen protector open like a page.

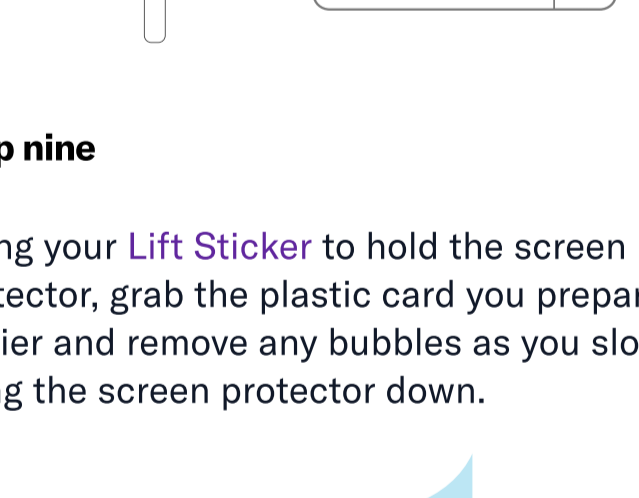

Step seven

Grab the **Alcohol Wipe** from the cleaning pack and give your Display a good wipe. Once clean, use the **Dry Cloth** from the cleaning pack to dry the alcohol on the screen.

Step seven

Grab the **Dust Removal Sticker** from the cleaning pack and remove the remaining dust by dabbing it on your Display

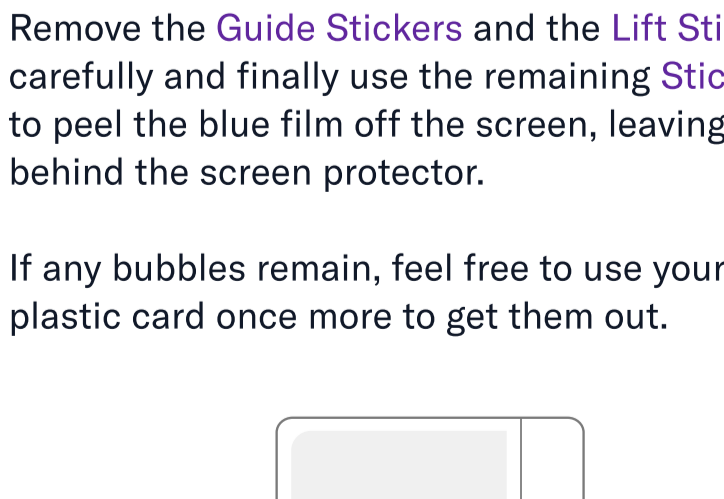

Step eight

Now with **Sticker 1** (bottom of the screen protector), peel the inner clear film of your screen protector completely off to reveal the sticky side.

Step nine

Using your **Lift Sticker** to hold the screen protector, grab the plastic card you prepared earlier and remove any bubbles as you slowly bring the screen protector down.

NOTE: Don't worry too much about the screen protector being perfect at this point. You can remove the bubbles once it's completely stuck down on the Display.

Step ten

Once the screen protector is fully applied to your Display, use your plastic card to remove any remaining bubbles by pressing them towards the edge of the Display.

Step eleven

Remove the **Guide Stickers** and the **Lift Sticker** carefully and finally use the remaining **Sticker 2** to peel the blue film off the screen, leaving behind the screen protector.

If any bubbles remain, feel free to use your plastic card once more to get them out.

All clear.
