

Figure 1

Using a clean lens cloth grip the glass firmly in one hand and the adaptor edge the other.

Figure 2

Rotate the adaptor clockwise while holding the glass still, the retention ring has quite a few threads so just keep turning.

Figure 3

Eventually the glass portion will come free of the adaptor, be careful as there are three pieces to the adaptors magnifying unit.

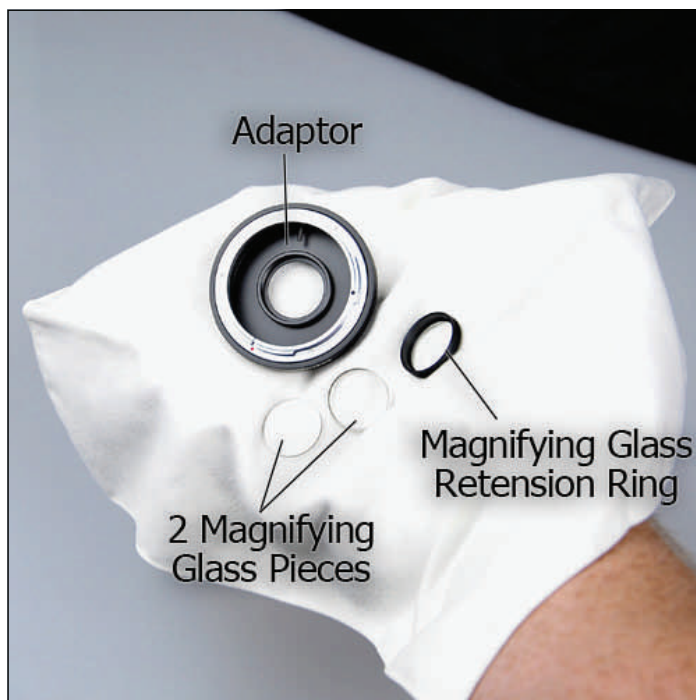

Figure 4

Put the pieces in a safe spot while using the adaptor, to put them in just reverse the process.
