G80 Chain & Fittings

Austlift™ G80 products are manufactured & tested to the requirements of Australian Standard AS 2321 'short link chain for lifting purpose' & AS3776 'lifting components for Grade T chain slings' in extremely high quality.

All G80 products are made from alloy steel, the chemical composition conforms to EN1677:2000 specification. They are quenched & tempered & uniformly marked with equivalent chain size, grade, batch number, manufacturer's ID & product 'type code' for positive identification.

We regard your safety as our priority. Tests are applied to every batch on a random sampling. Test certificates are available upon request.

Full Member

GRADE 80 IDENTIFYING FEATURES

G80 Lifting Chain

Austlift Grade 80 (T) chain is designed for chain slings for industrial lifting applications. It is made from hardened and tempered alloy steel. It has a high resistance to impact and meets critical requirements of AS2321 "short link chain for lifting purposes".

- Marked with chain grade with traceability mark.
- Safety factor 4 to 1.

G30 Chain

Austlift Grade 30 (L) calibrated chain is generally used in marine or vertical hanging support applications. It is manufactured from carbon steel which has a high resistance to impact and wear, meets AS 2321 "short link chain for lifting purposes". It is class A hot dipped galvanised.

- Marked with chain grade with traceability mark.
- Safety factor 5 to 1.

G80 Self Locking Hook /Latch Lock (Clevis Type, LC)

Austlift LC type clevis self-locking hook allows the hook to remain open until the load is engaged. The hook will not open until the trigger at the back is pressed. The clevis style allows connection to the chain.

- Marked with chain sizes, batch number, grade and Austlift branded with manufacture quality mark.
- Batch tested, test certificates available upon request.
- Spare trigger kits & load pins are available.
- Fatigue tested > 20,000 times.

G80 Self Locking Hook (Swivel Type, LS)

Austlift LS type swivel self-locking hooks have a ball bearing swivel to allow the hook to swivel under load thus reducing the twist of a sling. Designed with enlarged eye for passing larger shackles without disassembly of the hook.

- Ball bearing swivel allows the hook to rotate under full load.
- Marked with chain sizes, batch number, grade and Austlift branded with manufacture quality mark.
- Batch tested, test certificates available upon request.
- Spare trigger kits are available.
- Fatigue tested > 20,000 times.

G80 Swivel Self Locking Hook (Clevis Type, LT)

Austlift LT type swivel self-locking hook, clevis type, fitted with a ball bearing which will allow the hook to swivel under load. The clevis type allows the chain to connect directly to the hook which makes the chain sling compact and friendly to use.

- Marked with chain sizes, batch number, grade and Austlift branded with manufacture quality mark.
- Batch tested, test certificates available upon request.
- Spare trigger kits are available.
- Fatigue tested > 20,000 times.

With Latch

International Hoisting Hook (Eye type)

Austlift international eye hoist hooks with safety latch are commonly used for general lifting applications such as wire rope slings or winch cables.

- Marked with the working load limit and alloy. Austlift branded with manufacture quality mark.
- Batch tested, test certificates available upon request.
- Manufactured from forged alloy steel quenched and tempered.
- Spare Latch kits are available.

*** Special Note:** This hook is a positioning device & is not intended to rotate under load. Use in salt water requires the shank & nut to be inspected regularly.

Refer to page 41 for Hoisting Hook spare parts.

Swivel Panel Lifter

Concrete Lifter/ Clutch/ Swift Lift

Austlift panel lifters are a versatile lifting product for lifting pre-cast concrete products such as construction panels, pipes, columns etc.

- Marked with the working load limit, serial number and Austlift branded.
- Individually proof tested at 2 x WLL.

* Panel lifters should be checked regularly. Follow the regularly check table.

Ring Panel Lifter

Austlift ring clutch is a lifting device which is used together with Austlift cast plate anchors. Ring clutches are used for lifting large precast concrete panels. The ring head of the clutch has a locking bolt, which helps to safely lock into plate anchors while the concrete panels are in the lifting process. Austlift ring clutches are available in a variety of lifting capacities to suite to your work.

- All clutches are proof loaded.
- Batch tested, test certificates available with each unit.

* Panel lifters should be checked regularly. Follow the regularly check table.

Spread Anchor

Austlift Spread Anchors are produced from high strength low alloy steel plates. Austlift Spread Anchors have high tensile strength and good elongation. Due to special material, Austlift Spread Anchors has high impact test value and can be used under low temperature circumstances (up to -20°C).

- Upper hole of Spread Anchor is used for connection with Austlift Ring Clutch. Bottom hole is used for reinforcement.
- Due to reinforcement, force is transmitted to precast concrete element.
- Austlift Spread Anchors can be used for lifting of precast concrete girders, plates other elements.

Recess Former Kit

Austlift recess former kits are special lifting accessories which used together with an Austlift lifting stud and a Austlift lifting clutch. They are needed to create a hole in the concrete element, when lifting stud is mounted to the concrete. After concrete is stable, Austlift recess former is taken out and lifting clutch is used to lift the precast concrete element.

Austlift recess formers are made from rubber. Each size has a different colour, which makes identification of load class easier.

ADVICE

Safe Use

- Keep a register of all slings in use.
- Never lift with a twisted chain.
- Chain slings should be shortened with a shortening hook, never by knotting.
- Protect the chain against sharp edges by proper padding.
- Never point load a hook - The load should always sit correctly in the bowl of the hook.
- Always use the correct size sling for the load allowing for the included angle and the possibility of unequal loading.
- The master link should always be able to move freely on the crane hook.
- Avoid snatch-loading at all times.

Assymetric Loading Conditions

For unequally loaded chain slings we recommend that the working load limits be determined as follows:

- 2-leg slings calculated as the corresponding 1-leg slings
- 3-leg and 4 leg slings calculated as the corresponding 2-leg slings.

Acidic Chemicals & Atmospheres

Chain and components Grade G80 must not be used in acidic conditions or corrosive environment.

Note: Hot dip galvanising or plating is not allowed outside the control of the chain manufacturer.

Use of a grab hook 6mm to 26mm does not reduce the WLL of a sling, thanks to supporting lugs on either side of hook to prevent chain link deformation. Use of a shortening hook 32mm will reduce a sling to 25% of its WLL.

Maintenance

Periodic examinations must be carried out by a competent person at least every 6 months or more frequently according to statutory regulations, type of use, past experience and harsh environment.

1. Chains with bent links or with cracks or gouges in the link should be replaced. As should deformed components such as bent master links, opened up hooks and any fitting showing signs of damage.
2. The wear and tear of the chain and components shall in no place exceed 10% - is defined as the reduction for the mean diameter of the material measured in two directions.
3. Overloaded chain slings must be taken out of service. permanent elongation of chain is max 5% and permanent increase of hook opening max 10%.

Extreme Temperature Conditions

For G100 and G80 chain slings the in-service temperature of the whole or part of the chain sling affects the working load limit as follows:

TEMPERATURE OF SLING	ALLOY PRODUCTS REDUCTION IN WORKING LOAD LIMIT
-40° to 200°C	None
200° to 300°C	10%
300° to 400°C	25%
Over 400°	DO NOT USE

All Austlift alloy products meet the requirements of AS2321 for chain and AS3776 for fittings.

All Austlift chain and fittings are manufactured to Lloyds register quality assurance.

EN ISO 9001:9004 which is the direct equivalent to AS3901.

WELDING INSTRUCTIONS

For Austlift weld on hook (WH) & lifting point (WP)

TEMPERATURES	WLL REDUCTION
-40° to 200°C	None
200° to 300°C	10%
300° to 400°C	25%
Over 400°C	Do not use

General

To properly install and weld an Austlift weld-on hook and lifting point it requires a competent person who has experience in the lifting or load restraint industry and in addition requires a qualified, experienced welder to perform the welding job.

Positioning

The following precaution should be observed when you are positioning the fitting.

- This product shall be in the correct position to withstand all angles of the load strain.
- Positioned so that it cannot cause any damage to the product or other parts of the equipment to which it is welded.
- The use of this product can not cause any injury to persons operating equipment.
- Cannot cause any unintentional unhooking when in use.
- Placed in a position so that it can be easily hooked and unhooked safely.
- The product does not hinder any operation e.g. lifting or excavation.
- If this product is used for an excavator it should be welded in the middle upper part of the bucket.
- A qualified person shall certify that the product can be taken into service.

Warning

UNDER NO CIRCUMSTANCES SHOULD YOU EXCEED THE WORK LOAD LIMIT OF THIS PRODUCT

- Do not use these products in an acidic environment.
- Contact your supplier for advice if these products are used in a corrosive environment.
- Do not treat this product with electric or hot dip galvanising at any time.

Lifting

- When handling loads this must be done smoothly and free from jerking motions.
- Never apply the load directly on the latch or on the tip of the hook.
- Side loading is not permitted for weld on Hooks.
- When lifting the load you should use the bottom part of the hook and the latch should be in closed position.

WARNING

Components should be taken out of service immediately if any of the above faults are detected.

Welding

1. Material

Take note of the tensile strength of supporting material to weld to. Use the guide on page 44 to determine the correct height, length and thickness to ensure the right strength of support material in mild steel.

2. Electrodes

Any welding of this product should be carried out by a qualified person. Electrodes or wire shall be for use with low alloy or non-alloy steel.

Electrodes must be free from any moisture and wire free from rust before any kind of welding is to be carried out.

Recommended welding electrode; AS/NZS 1553, ISO 2560, DIN EN 499 BS EN 499 or equivalent.

3. Welding

Make sure all areas to be welded are cleaned and free from rust, paint, dirt, etc.

- The surface to be welded should be preheated. Ensure correct welding procedures are adopted in this case.
- First position the hook or lifting point then tack weld all four corners.
- Continuously weld the bottom joint and fill weld all around. Make sure the lifting point is welded to the ends of the bow.
- To reach maximum penetration, ensure that the welding torch or electrode is held at a 45° degree angle.
- It is recommended that you weld the top joint of the hook with a larger electrode.
- Ensure that there are no cracks or pores in the welds or welded area.
- Allow the weld to cool at room temperature. Do not use water or a fan to cool the weld.
- All bare and unwelded areas should be painted to avoid rust.
- All moving parts should be well lubricated after welding.
- MIG welding has less penetration than others and it is not recommended for welding G80 components.

Inspection

A qualified person should inspect components regularly to maintain safe operating procedures.

- Check for bends, nicks, wear, stretching or elongation of the components.
- Check for any signs of corrosion.
- Check for any scoring or cracks on all welds and components.
- Check the latch, rivet and spring. Latch shall be working properly.

WELDING INSTRUCTIONS

1 POSITION

Alloy Chain & Fittings

2 WELDING

Triple weld runs may have to be conducted in order to reach minimum weld fillet area (A).

3 LOADING

SWIVEL PANEL LIFTER INSTRUCTIONS

Coupling

1. Check the load duty of the Anchor.
2. To connect the clutch to the anchor, the sphere is pushed with its opening facing downwards over the anchor.
3. The tongue of the sphere is then turned downwards to close around the anchor.

Lifting

1. The clutch is suitable for axial loads and pitching. The unit can also be swivelled on the clutch when pitching the unit, the tongue must be in the closed position as shown.
2. Due to the counterweight of the tongue the sphere is always kept in the correct position, even if the load is released.
3. Turning the clutch Head under load is limited by friction. Small quantities of grease are permitted if necessary.

Release

1. When the load is taken off, release the clutch by turning the sphere with the tongue as shown.
2. Lift the clutch away and do not let it dangle over the anchor.

RECESS FORMER INSTRUCTIONS

RING PANEL LIFTER INSTRUCTIONS

Before lifting the precast concrete unit, remove as many sections of the mould as possible to minimise adhesion to the mould. Inadequate demoulding is the most common cause of flaking of the precast concrete unit as the forces acting on the lift system may be several times the actual weight of the precast unit.

The ring clutch is used for all load directions. Maximum load of anchor and clutch must be considered. Angle pull caused by spreaded chain suspension is limited by a maximal 60°.

RECESS FORMER INSTRUCTIONS

1

To demould the recess former, insert two rods into the holes and levered out with a scissor action. This procedure can avoid damage to the recess former. Attempting to remove the recess former using the tip of a carpenter's hammer will destroy it.

2

To transport the concrete panel, an appropriate ring clutch should be inserted over the anchor head which is in the concrete recess. The load ranges are designed to mismatch-proof.

3

The ring clutch is positively locked by a simple hand-operated movement of the locking bolt resulting in a safe connection and the clutch. Then to move in any direction. The precast panel can now be lifted out of the mould for transporting.
