

Locks Guide

How to use the locks?

Our luggage comes with two TSA-approved combination locks.

The locks are factory-set to 0-0-0 and can be changed to your desired combination.

Please note; that once the combinations are set, only you will be able to open your suitcase.

We strongly recommend that you make a note of your combination.

How to change locks?

In order to proceed, the suitcase must be unlocked and open.

Unscrew the 3 screws located behind the locks

- Hold the lock from the outside for security
- Please do not discard the screws as they will be needed when attaching the new locks.

Align and attach the new locks and screw the existing screws in place
