

# Trolley V2 Guide

## How do I attach the trolley system?

Open the lining of the suitcase with the puller. Arrow in the image below shows the location of the puller.

Unscrew the 6 screws shown below (located underneath the handle).

- Please do not discard the screws as they will be needed when inserting the new handle system.

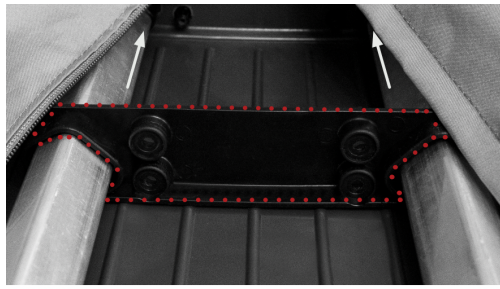

Unscrew the 2 screws at the base.

Pull out the handle system and keep the black bracket inside the suitcase. The bracket is marked in Red in the image below.

Insert the new handle system and ensure the metal pipes are going through the black bracket.

Align the base end of the metal pipes so they slide into the plastic base bracket and fasten the top 6 screws and the 2 bottom screws then rezip the lining.

Test the trolley system by moving the handle up and down.

Test the pipes by: With handle fully extended, push the handle button, and pull on the bottom of the base near the suitcase ensuring smooth movement.
