

1. Remove cable from transformer

2. Locate connections C-C in the foliage of bottom section of the tree and disconnect.

3. Remove connection plate from the bottom section by simply pulling upwards.

4. The foot pedal will now be completely detached from the tree and be able to be removed and put to one side.

5. Take the new connection plate and push on the pole at the top of the bottom section replacing the one removed. Feed the wires and the foot pedal through foliage.

6. Attach cables C-C before connection the transformer to the new foot pedal cable. Once wires are connected and in place - Plug in transformer to check everything is working.
