

Installation Instructions

LB-63 Ghost Bridge

Graph Tech's LB-63 Ghost bridge is a drop-in replacement for most Floyd Rose Original and Licensed bridges, and will open the door to MIDI and/or acoustic sounds from your electric guitar when installed with Graph Tech's Hexpander MIDI adapter or Acousti-phonic preamp.

Installation of the LB-63 Ghost bridge requires only minor modification of the guitar body (a hole drilled between the bridge and control cavities to pass wires through) and is as easy as changing a pickup. If you are not comfortable with performing this work on your guitar, please contact a local guitar technician to ensure that it is performed properly.
